Subject: some sediment data
Attachments: snip of Tier 2 selections.docx; PDI Tier 1 benzyl alcohol data (validated).xlsx; snip of prelim BA results.docx

Tasya,

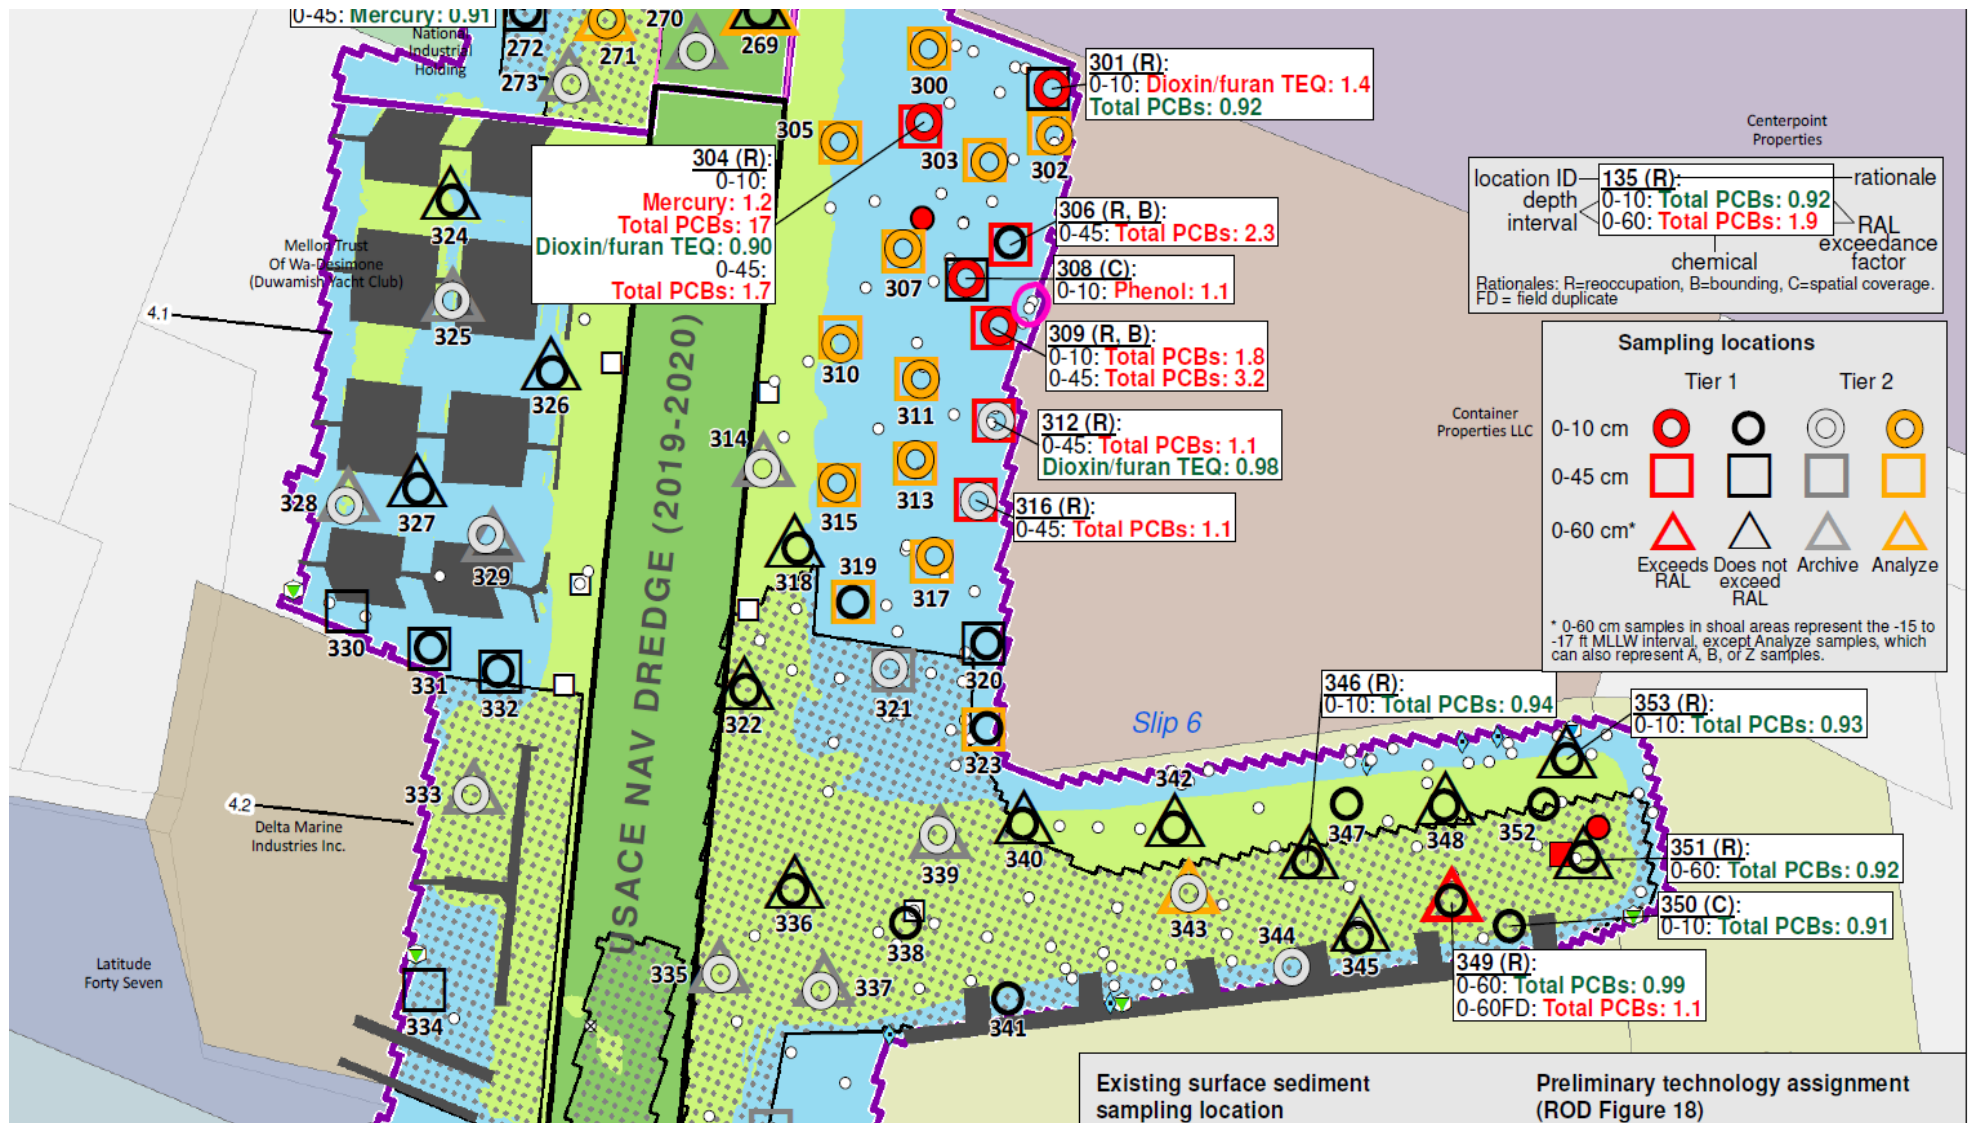

For what it's worth I am sharing with you some limited, cobbled-together information of the sediment sampling results. It's the best I can do until the final validated results are released ~mid-November. Here is what's attached:

1. Snip of map showing RAL exceedance factors and selection of Tier 2 sampling locations for all results except benzyl alcohol (this map shows sample location #s).
2. Table of benzyl alcohol results – It's all the BA results, so we'll have to refer to the first snip to find which locations are at/near Rhone-Poulenc.
3. Snip of map showing preliminary benzyl alcohol RAL exceedances (no sampling location #s or values). The RAL is in the table above.

There is a table that details the Tier 2 decisions, like for each location what depth interval will be analyzed for which chemicals, along with the RALs. But I've been asked to not share it and only describe the information in it. We can do that next time we talk if you'd like.
